

COMPANY

«UNIT-IS» is a team of professionals with over a decade of experience in the telecommunications and IT-development projects!

The team consists of qualified system and network engineers, developers, programmers, designers, and experienced managers. We developed a systematic approach to solving complex problems of our customers and are not afraid of a responsible work.

At summer 2011 we launched our data-center with an initial capacity of more than 3000 unit. This event was the next step in the development of our team. Company itself was founded in 2011.

Data center «UNIT-IS» is a reliable partner with a full range of affordable hosting services.

DATA CENTER

WE BUILD BUILD, AND FINALLY BUILT IT!

We – the UNIT-IS company - the first commercial data center in Ukraine with an initial capacity of more than 3000 units, organized to provide multi-hosting services of renting computing power of any level and performance.

With our own resources, we can offer more competitive prices than most resellers, as well as we are responsible for the quality of service and high standards of execution of all engineering systems.

Our equipment is placed in our own technical platform of the new professional data center, located in Odessa and built according to modern standards in 2012. Equipment is provided with redundant uninterrupted power supply, climate control systems, 24-hour monitoring and security, which guarantees you a reliable placement of your website or server.

Backup power supply with a total capacity of more than 250 kW/h

The air conditioning is organized on the principle of hot and cold aisles

Main power supply system is powered by two inputs

Server racks are placed in an enclosed pressurized zones

Controlled power outlets from APC

Professional internal wiring of electric networks

The core of the data transfer on the Foundry BigIron router

Automatic server security control

Qualified support personnel

Fire extinguishing system

Systems and parameters monitoring

POWER ENGINEERING

Professional internal electric wiring, two independent inputs, backup power supply.

TEMPERATURE CONTROL

The air conditioning is organized on the principle of hot and cold aisles. 24-hour monitoring of climate indicators.

DATA TRANSFER

The core of data center's data transfer is based on the Foundry BigIron router. We provide gigabit ports for client servers, data backup system, our total channels capacity is 10 Gbit/s.

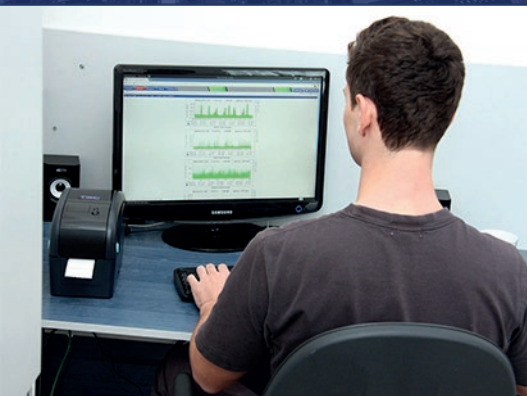

COLOCATION

Server racks are placed in an enclosed pressurized zones. We use only rack-type servers and provide separate managed port for every client's server.

CLIENT SUPPORT

Qualified experienced personnel, the English and Russian-speaking customer support, round the clock monitoring of all systems, limited access of third parties, high standards of cleanliness.

Free 10-day trial!

CLUSTER WEB HOSTING

Virtual web hosting (shared hosting) – is the simplest, most convenient and cheapest way to place web site of your project or company on the Internet.

Simple «all in one» control panel

Single web interface for services management, domains, funding and customer support via ISPmanager Lite hosting management panel.

Simple solution with professional features

Ability to simply install more than 100 different web applications through the control panel.

Independent structure and personal space for web site

Web hosting will be perfect for both personal page, and for a large site, blog or a small forum.

Lowest prices on the market!

Web hosting plans start as low as 2\$ per month.

WHAT CLUSTER WEB HOSTING IS?

Our web hosting service is organized on cluster of **10 servers**, based on a system from ISPmanager Cluster, which allows us to provide the highest level of speed and reliability of your website.

Advanced system of redistribution of the load differs UNIT-IS cluster hosting from virtual hosting of other providers. Work of your site is provided not by a single server, as it is usually done in 90% of web hosts, but by a cluster of servers, what allows us automatically redistribute the load. In addition, the failure of any server in the cluster will not affect the stability of entire system, because of all the «vital functions» are duplicated.

Advantages of UNIT-IS cluster:

- Two 8-core Intel Xeon processors in each server;
- 24 GB of ECC RAM in each server;
- The database server runs on array, which consists of SSD-drives with performance speeds of more than 400 MB/s and more than 50,000 IOPS per second;
- User files are stored on a fail-safe RAID 10 array;
- Each functional server is reserved.

Hosting works greate with:

APACHE

WORDPRESS

opencart

NGINX

Drupal

php

Joomla!

MySQL

SERVICES AND RACKS COLOCATION

Included in price:

100/1000 Mbit/s port

Bandwidth is not limited by any way physically.

Climate control

with constant temperature monitoring.

Limited access to the rack

Only UNIT-IS technical personal has access.

When renting a rack:

Autonomous 42-unit rack

with upgrade ability up to 10 Gbit/s.

Electricity counter

You pay only for what you consume.

Our principles:

We host only legal content

No warez or pornography.

If you are not ready to invest in the infrastructure of your own corporate data center, but required computing power has exceeded the scope of several industrial servers, UNIT-IS offers you to rent a server rack inside the infrastructure of our data center. This will give you all the privileges of renting a server and will provide full freedom in management of your IT resources, reliably and safely.

ADDITIONALLY YOU CAN ORDER

Access to the switched rack PDU

For an additional fee you can access switch rack PDU, providing advanced load monitoring combined with remote on/off switching control.

24 hour remote video monitoring

Ability to install webcam to visually monitor the status of your rack or several servers (starting from 5 units).

Protection from DDoS

To protect servers from DDoS attacks and hacking we use special equipment for diagnostics and early filtration of malicious traffic from the web.

Number of units	Price	Bandwidth	Power supply
1–5 units	25\$ unit per month	20 Mbit/s	Included in price, no more, than 100W of real power consumption per unit.
6–9 units	20\$ unit per month	40 Mbit/s	Included in price, no more, than 100W of real power consumption per unit.
10–19 units	15\$ unit per month	60 Mbit/s	Included in price, no more, than 100W of real power consumption per unit.
42-unit rack	625\$ rack per month	100 Mbit/s	Power for prices of electricity company + 10% maintenance costs.

2 and more racks

for such projects we have special approach,
